0108-354 US-1 10/798,845 03100199aa Amendment dated 04/23/2012 Reply to office action mailed 12/21/2011

The following is a complete listing of all claims in the application, with an indication of the status of each:

Listing of claims:

1 1. (previously presented) An orthopedic aid which is used by a patient for 2 walking and which provides a supporting function for the human body. 3 comprising: 4 two parts which are rotatable relative to one another; 5 a locking device for locking the two parts in an extended position so 6 that a rotation of the two parts relative to one another is blocked during 7 standing and walking and for manually unlocking the two parts to permit 8 rotation of the two parts with respect to one another in a rest position, 9 wherein said locking device is operable by a user of the 10 orthopedic aid; 11 means for automatically detecting locking of said locking device; and 12 a signaling arrangement which emits a signal, responsive to said 13 means for automatically detecting said locking, for alerting the user of the orthopedic aid that the locking of said locking device has taken place. 14 2. (canceled) 3. (previously presented) The orthopedic aid as claimed in claim 1, wherein 1 2 the signaling arrangement emits a signal upon unlocking. 1 4. (previously presented) The orthopedic aid as claimed in claim 1, wherein 2 said signaling arrangement provides a signal which is visual, acoustic, tactile 3 and/or mechanical

	Amendment dated 04/23/2012 Reply to office action mailed 12/21/2011
1	5. (previously presented) The orthopedic aid as claimed in claim 1, wherein
2	said means for detecting includes a detection arrangement designed to
3	generate the signal electrically as a function of the locking state.
1	6. (previously presented) The orthopedic aid as claimed in claim 1, wherein
2	the locking device has a movable locking pin whose position is detected by
3	the means for detecting.
1	7. (previously presented) The orthopedic aid as claimed in claim 1, wherein
2	the locking device is actuated electromechanically to permit unlocking.
1	8. (previously presented) The orthopedic aid as claimed in claim 6, wherein
2	the movable locking pin is arranged such that it can be drawn into a magnet
3	coil to permit unlocking.
1	9. (previously presented) The orthopedic aid as claimed in claim 6, wherein
2	the detection arrangement is designed for electrical scanning of a position of
3	the locking pin.
1	10. (previously presented) The orthopedic aid as claimed in claim 1 further
2	comprising an electromagnetic actuating arrangement with a low actuating
3	force of not more than 2 N, wherein the locking device, when in the extended
4	position, has a slight play, allowing a freedom of movement of the locking
5	mechanism in the loading pertaining to the extended position, whereas, in the
5	event of a load exerting a turning moment on the locking device, the locking
7	device cannot be unlocked by the actuating arrangement on account of
3	frictional forces.

1		
1	11. (previously presented) The orthopedic aid as claimed in claim 1, wherein	
2	the locking device is actuated by wireless transmission of an actuating signal.	
3	12. (previously presented) The orthopedic aid as claimed in claim 11,	
	wherein an actuating signal for wireless transmission of a command signal is	
4		
5	triggered on a handgrip of a walking aid.	
1	13. (previously presented) The orthopedic aid as claimed in claim 11,	
2	wherein the signal of the signaling arrangement is sent by wireless	
3	transmission to a walking aid.	
_	dansarion to a waiting are.	
1	14. (previously presented) The orthopedic aid as claimed in claim 13,	
2	wherein the walking aid has a visual and/or acoustic signal display	
3	arrangement.	
1	15. (previously presented) The orthopedic aid as claimed in claim 13,	
2	wherein a handgrip of the walking aid is provided with a vibrator that can be	
3	actuated by the signal of the signaling arrangement.	
1	16. (previously presented) An orthopedic aid which is used by a patient for	
2	walking and which provides a supporting function for the human body,	
3	comprising:	
4	two parts which are rotatable relative to one another;	
5	a locking device for locking the two parts in an extended position so	
6	that a rotation of the two parts is blocked during standing and walking and for	
7	manually unlocking the two parts to permit rotation of the two parts with	
8	respect to one another in a rest position, wherein said locking device is	
9	operable by a user of the orthopedic aid;	

0108-354 US-1 10/798.845 03100199aa Amendment dated 04/23/2012 Reply to office action mailed 12/21/2011 10 means for automatically detecting the locking state of said locking 11 device; and 12 a signaling arrangement which emits a signal, responsive to said 13 means for automatically detecting the locking state, upon unlocking as a 14 warning signal in the event of inadvertent unlocking of the locking device. 1 17. (previously presented) An orthopedic aid as in claim 1, further 2 comprising a safety function for operation of the supporting function, wherein 3 said signal confirms an observation by the user that the orthopedic aid is 4 locked. 1 18. (previously presented) An orthopedic aid as in claim 16, further 2 comprising a safety function for operation of the supporting function, wherein 3 said signal contradicts an observation by the user that the orthopedic aid is 4 locked.
